NEWS RELEASE – FOR IMMEDIATE RELEASE

The PipeKnife® Company adds to its broad product lines with the purchase of the Arctic Warmer Product line of sealant warming bags from Reasor Products, Inc.

Golden, Colorado, September, 29, 2016 - The PipeKnife® Company (www.pipeknife.com and www.pipeknifecaulktools.com), manufacturer of the original PipeKnife® sealant cutout knife today announced it has purchased the Arctic Warmer line of sealant warming bags from Reasor Products, Inc. effective October 1, 2016.

Reasor Products President, Lance Reasor said “I look forward to PipeKnife® Company stepping into the picture and applying their talent to continue to grow the business. Dell Skluzak, President of PipeKnife® has been a great promoter of the product line for several years; he even did the video with Cool Tools that is featured on our web-site when we were featured on the show!” Brenda Witte, CFO of Reasor Products said, "Dell has been wonderful to work with for many years and I look forward to their success in expanding the market and including these warming products in his product mix."

“The addition of the Arctic Warmer products line is complementary to our product line and customers we serve,” said Dell Skluzak, President and founder of The PipeKnife® Company. “With over 200 plus distributors worldwide we intended to increase customer awareness of the product, expand the exposure of the warmers to many more customers and provide easier distribution of the product to existing customers.”

Skluzak continued, “The Arctic Warmer’s line of heated warming bags for all types of sealants, epoxy, urethanes, foams and other adhesives is complimentary to the current line of sealant cutout tools and accessories. Many customers currently purchasing the Arctic Warming Bags are already customers of The PipeKnife® Company.”

The Arctic Warmers are of multiple sizes for tubes, pails, barrels, cylinders and many other products that dispense sealant, urethanes and foam materials. Their unique design of a flexible heat reflecting foil that retains and reflects heat back into the product and requires only a small amount of energy has won local and international awards. The specially designed warming membrane provides maximum heat transfer to the material and carefully designed closures and rugged outer fabric retains the heat and withstands the rigors of commercial construction fieldwork. Contractors will significantly increase their productivity at cold temperatures, with the sealant material being easier to dispense with the Arctic Warmer product. The product line eliminates the contractor's need to keep a vehicle running to keep the material warm for application.

About Reasor Products, Inc.

Reasor Products, Inc. located in Duluth, MN, is the maker of the Arctic Warmer and Pajama Warmer product lines. The Arctic Warmer was developed to solve cold weather application of sealants, epoxy, foams and caulking. Reasor has taken that idea from concept to prototype, manufacturing, and distribution utilizing best practices and created the Arctic Warmer line of heated warming bags and wraps. www.arcticwarmers.com
