PRESS RELEASE

The PipeKnife® Company, manufacturer of the "Original PipeKnife®", introduces the "Setting Mate™ an affordable one-person windshield setting tool and Setting Mate Jr™." a unique and simple setting block specifically designed to be used when setting back glass.

The Setting Mate™ designed by an experienced auto glass replacement professional uses a simple to install system to assist in removing and precisely setting a new windshield. The Setting Mate™ is composed of (A) the glide carriage, which holds the entire weight of the replacement glass, allowing the AGR technician to glide or slide the glass into position and (B) setting blocks to precisely place the glass during installation.

The Setting Mate™ includes 3 unique setting blocks designed to fit the majority of windshields, two glide carriages and tools to attach the devices to the cowl frame. The tools come in a hard shell case for easy carrying and storage.

The advantage of the **Setting Mate™** are the less than one-minute setup to install the stop and glide carriage, no additional weight added to the glass, simple and easy to learn to use, the glide carries the entire weight of the replacement glass and the **Setting Mate™** costs a fraction of other setting tools.

The PipeKnife® Company also is introducing the **Setting Mate Jr.™** This simple setting block uses a design that easily attaches to the trunk gasket pinch weld flange and provides a glass stop to precisely set the new glass in the original position. The **Setting Mate Jr.™** design provides for multiple positions to accommodate many different gaps.

Both new items are patent pending and will be introduced at the Auto Glass Week to be held in San Antonio, TX October 5-7, 2016.

Contact Dell Skluzak, The PipeKnife Company at (303) 232-8788 or www.pipeknife.com for more information.
